Chicago, IL USA

mind | body | spirit

Dr. Chopra believes the path to long-term success lies in treating patients' spirit, mind and body – not just their medical conditions. His institute has given him the opportunity to create a well-thought-out environment where patients and their families can feel calm, get the information they need and be treated with cutting-edge healthcare technologies.

Dr. Romi loves to spread the good word. His passion for helping and educating other physicians, patients and medical professionals showcases his passion to help people. His positive and engaging personality has influenced audiences across the country.

lending his eastern roots and extensive western experience Dr. Romi unifies the best of both worlds. His in-depth understanding of complex patient conditions is backed by state-of-the-art treatment therapies, enabling him to deliver exceptional patient care of the highest quality.

Dr. Paramjit "Romi" Chopra, M.D. is an interventional radiologist with over 30 years' experience in the field of interventional radiology and endovascular therapy. The standards for his daily work were set after completing his medical studies and training in Mumbai, India, followed by his fellowship and residency at Brigham and Women's Hospital and Harvard Medical School in the US. After working extensively in academia and research, Dr. Chopra became one of the youngest heads of an interventional radiology department in the US. Eager to share his experience, he placed great emphasis on training and introduced a wide range of education and research programs for students, colleagues, and residents. At the same time, however, he was committed to keeping the focus firmly on patient needs at all times.

Dr. Chopra opened the Midwest Institute for Minimally Invasive Therapies (MIMIT) in 2004. As an interventional radiology and endovascular therapy practice, MIMIT specializes in minimally invasive treatments for arterial disease such as peripheral artery disease (PAD), uterine fibroid disease (UFE), venous disease and musculoskeletal disease (spine interventions).
